

Accurate & Effective Interrogations

DELIVERING A GAME CHANGING TECHNOLOGY THAT ASSURES YOUR INVESTIGATION IS A SUCCESS.

Interrogations and getting suspects to confess to a crime is not easy. Conducting such interrogations requires a lot of experience and skill both of which are very hard to come by. The process is often very long, tedious and uncertain. Wrong and false confessions are just some of the consequences of an interrogation gone wrong. With BEYONDVISION VÉRITÉ's platform interrogators are no longer alone and do not have to carry the burden of deciphering the suspect's behavior and strategizing the dynamic of the interrogation.

Based on our triple layer video analytics technology, BEYONDVISION VÉRITÉ's platform delivers Behavioral patterns analysis and on both on psychophysiological as well as neuro levels in real time without the need for any sensor or electrodes. Our technology is designed to overcome any mastered manipulation and methods used to bypass suspect detection systems and deliver the most reliable video analytics solution in the market.

MACHINE LEARNING

Every milli-second, hundreds of evolving parameters are extracted to compose a suspect or suspects behavioral profile. Every few seconds the system completes a full analysis cycle where over 200 parameters out of 25,000 are cross examined to develop a behavioral patter. This continues in cycles of seconds until a full behavioral profile is composed. Due to our intensive and encompassing data collecting and analysis, BEYONDVISION's technology delivers accuracy rate of over 1 million times any available solution today.

DEEPER SENSE TECHNOLOGY

Over 25,000 of medical, non-medical, psychological and neurophysiological collected parameters are sent every few seconds to create a behavioral profile. These are quickly analyzed and are crossed referenced and cross checked to eliminate any false negatives assuring the highest reliability available

BEYONDVISION VÉRITÉ

VISUAL STRESS ANALYSIS EXPLORER SOFTWARE

Create a Suspect Profile Archive

In addition to obtaining a suspect's behavioral pattern in real time, with the BEYONDVISION VÉRITÉ Explorer you can create a suspect profile archive and analyze pre-recorded video material at your time and in offline mode. This enables comparison of profiles and gaining further insight and understanding to any investigation. Each processed video file is converted to custom encrypted storage file type. With our BEYONDVISION VÉRITÉ Explorer you can obtain Interactive video reports and interactive and fast playback of any segment of the video recording including displaying relevant metadata relating to a given time interval.

Added Values

- Save time and resources in obtaining critical information and data
- Interrogations can be conducted by a wider skill level
- High accuracy rate
- Establish behavioral pattern
- Real-time suspect detection and analysis
- Shorten investigation time and process
- Ascertain the path of investigation
- Cut on costs and resources

Features

- ✓ Deep analysis of recorded video files during the interrogation process.
- ✓ An easy-to-use stress-segmentation navigation map that provides an optimized and effective way for further exploration focusing on the interrogation's focal points.
- ✓ Interactive and fast playback of any segment of the video recording including displaying relevant metadata relating to a given time interval.
- ✓ Export capabilities, allowing to export the processed video's metadata to csv, PDF files.
- ✓ Interactive video reports.
- ✓ Each processed video file is converted to custom encrypted storage file type.
- ✓ Exploration charts displaying the most important behavioral data that provides a wide range behavioral picture of the interrogated.
- ✓ Flexible and modular UI
- ✓ Compatibility and synchronization with BEYONDVISION VÉRITÉ Recorder software.
